MID-ROTATION RELEASE

Professional
Vegetation
Management

 **BASF**

The Chemical Company

ARSENAL[®]
herbicide

The need for brush control doesn't end when you've established your stand. In fact, mid-rotation release treatment of 10- to 15-year-old pines with Arsenal® herbicide Applicators Concentrate (Arsenal AC) can boost growth rates, improve timber quality, and pay off in a potential annual rate of return of more than 11% over 10 years.

Even in older stands with a closed pine canopy, understory brush and other competitors for moisture and nutrients can undercut pine growth – and profits. **Quality Vegetation Management™ (QVM)** with **Arsenal AC** keeps competitors at bay throughout the forest life cycle, yielding big potential increases in both merchantable volumes and timber value. In one study, **Arsenal AC** cut hardwood competition in a 14-year-old loblolly stand by 76% – and increased pine volume by 20% after six years.¹

*A clear understory, achieved through a treatment of **Arsenal AC** followed by controlled burning, allows sunlight to reach the forest floor so food plants for wildlife can flourish.*

 **BASF**

The Chemical Company

Arsenal AC used during mid-rotation eliminates hardwood competition and increases the value of your stand.

A Clearer Path To Land Value.

By clearing low quality, hardwood brush – without targeting the legumes wildlife use for food – **Arsenal AC** makes your land more accessible and more attractive to hunters, recreationists and wildlife. As every forest landowner knows, that's a clear path to increased income-generating land value while you wait for harvest.

The Perfect Solution.

Arsenal AC gives you broad-spectrum, long-term control of low-quality hardwood brush, broadleaf weeds and grasses – with outstanding pine tolerance. It can even control the toughest species, like: sweetgum, purple loosestrife and cogongrass. The result? A vegetation control solution like no other.

The Full Treatment: Life Cycle Management with Arsenal AC.

Count on **Arsenal AC** to control competing vegetation throughout the life cycle of your pine stands.

- **Herbaceous Weed Control** in the critical first and second seasons.
- **Pine Release** boosts merchantable volumes by controlling hardwood brush in young pine stands. (Please refer to label.)
- **Mid-Rotation Release** clears hardwood brush halfway through pine stand rotation, for faster growth, bigger pines and better timber at harvest.

Arsenal AC at Mid-Rotation: Benefits You Can Bank On

- **Increases pine volume**
by as much as 20% over six years.
- **Increases pine diameters**
for higher value timber.
- **Significant return on investment.**
Average real rate of return 11% per year.
- **Controls the toughest competitors.**
Hardwoods, brush, waxy species, broadleaves and grasses.
- **Improves accessibility and land value**
for hunting and recreation.
- **Lowers fire risk.**
Thanks to reduced fuel loads.
- **Pine tolerance.**
Arsenal AC selectively targets competing vegetation and provides outstanding pine tolerance when used according to label directions.
- **Helps enhance wildlife habitat.**
Arsenal AC increases plant diversity and doesn't target the legumes wildlife use for food.

Arsenal AC Mid-Rotation Release Treatment Pays Off

1. The real rate of return is the nominal rate minus the inflation rate.
 2. Fifteen years after treating a 10-year-old stand.
 3. 1986-1996, adjusted for inflation.
